DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

BARTLETT, Marincic et al. "Electrochemical Glucose Oxidation on a Platinized Platinum Electrode in Krebs-Ringer Solution" J. Electrochem. Soc.: Electrochemical Science and Technology 126 (1), 43-49 (1979) (hereinafter referred to as "MARINCIC"), and Evans et al. "Detection of Hydrogen Peroxide at Mesoporous Platinum Microelectrodes" Anal. Chem. 74, 1322-1326 (2002) (hereinafter referred to as "EVANS") are the most relevant art.

The prior art fails to teach a method of detecting glucose as claimed wherein a mesoporous platinum electrode without an immobilized enzyme is used.

More specifically, while BARTLETT teaches the formation of a mesoporous platinum electrode (see discussion above with respect to BARTLETT), BARTLETT does not teach the method of its use for the detection of glucose without the use of an enzyme.

Also, MARINCIC while teaching a method for the detection of glucose using a platinum electrode without the use of an enzyme (see page 44), MARINCIC does not teach the platinum electrode having a mesoporous platinum layer as claimed.

Furthermore, EVANS does not teach a method of using a mesoporous platinum electrode without having an enzyme immobilized thereon and would not lead one of ordinary skill in the art to do so.

Therefore, it is the examiner's opinion that the cited prior art neither teaches nor fairly suggests the use of platinum mesoporous layer covering the surface of an electrode for the detection of glucose without any enzyme being immobilized thereon.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
